

Bearing No. 6301/2RS/NR

|                                               |                              |
|-----------------------------------------------|------------------------------|
| Weight                                        | Contact Seals With Snap Ring |
| Radius Rs min                                 | 0.060 Kg                     |
| Outside Ring Width B                          | 1.000 mm                     |
| Outside Diameter D                            | 12.000 mm                    |
| Features                                      | 37.000 mm                    |
| Cr - Dynamic Load Rating                      | 27000 rpm                    |
| C0r - Static Load Rating                      | 19000 rpm                    |
| Bore Size d                                   | 9.70 kN                      |
| Clearance                                     | C0 (Normal)                  |
| Bearing Type                                  | 4.2 kN                       |
| Grease Reference Speed                        | 12 mm                        |
| Oil Reference Speed                           | Standard DGBB                |
| r - Outer Ring "To Clear" Radius <sup>3</sup> | 1.120 mm                     |
